Hosting with Dropbox

About

This tutorial describes how to host a copy of MDwiki with Dropbox

Attention: **Free accounts made later than August 2011 will not work with this method.** Try GitHub Pages or Google Drive hosting instead. Pro and Business Dropbox accounts can enable their public folder here, and still use this tutorial.

Note: This tutorial is incomplete. Please help us by completing it for beginner users: Contribute.

Intructions

Step 1: Get a Dropbox account

Step 2: Download `mdwiki.html` to your Dropbox

- Rename to index.html if you like.

Step 3: Edit your Markdown files

- Create an index.md file and edit it. Do not edit the index.html file! Try following the quickstart guide.

Step 4: Public hosting

- For old, pro, and business Dropbox accounts, you have `Public` folder you can get a link to - this can be used for hosting. If you need a Public folder, get one here.

Get images from a users phone via QRCode or Link with upld.app JavaScript API.
